SALTS OF PAROXETINE

The present invention relates to novel compounds, to processes for preparing them and to their use in treating medical disorders.

5

Pharmaceutical products with antidepressant and anti-Parkinson properties are described in US-A-3912743 and US-A-4007196. An especially important compound among those disclosed is paroxetine, the (-)-*trans* isomer of 4-(4'-fluorophenyl)-3-(3',4'-methylenedioxy-phenoxy-methyl)-piperidine. This compound is used in therapy as the hydrochloride salt for
10 the treatment and prophylaxis of *inter alia* depression, obsessive compulsive disorder (OCD) and panic.

The present invention provides novel salts of paroxetine which may be used as an alternative to the currently marketed hydrochloride, or as an intermediate in the preparation
15 of the hydrochloride.

According to the present invention there is provided a salt of paroxetine with an acid selected from the group consisting of:

2-methyl-3-phenylbutyric acid

tricyclo(10.2.2.2(4,7))octadeca-hexaene-9,10-dicarboxylic acid

1-pyreneacetic acid

2,4,6-trifluorocinnamic acid

2-bromoisobutyric acid

cyclohexylsuccinic acid

3,5-dichloro-2,6-dimethoxybenzoic acid

5-ethoxy-2-hydroxybenzoic acid

trans-11-eicosenoic acid

3-bromopropionic acid

3-[5-(4-bromo-phenyl)-furan-2-yl]-acrylic acid

2-phenylacrylic acid

21-docosenoic acid

n-(p-amylicinnamoyl)anthranilic acid
(2'methyl 4' amino) phenyl azo naphthylene 3,8 disulfonic acid
7,7-dimethyleicosadienoic acid
2,5-dibromobenzenesulfonic acid

2,4-dimethyl-5-(tert-butoxycarbonyl)-3-pyrrolepropionic acid
5-amino-2-hydroxybenzenesulfonic acid and
3-aminopyridine-2 carboxylic acid.

Hereinafter this group of acids is referred to as "the Group of Acids".

When an acid selected from the Group of Acids is a multifunctional acid, salts formed with
5 paroxetine may contain varying proportions of paroxetine, depending on the number of
acid groups that are associated with a paroxetine molecule. All such salts are within the
scope of this invention.

Generally steric considerations dictate that in the case of a multifunctional acid which is
10 has a functionality greater than two, the acid anion will not be associated with more than
two paroxetine molecules.

Therefore in respect of all the acids in the Group of Acids, a particular aspect of the present
invention provides a paroxetine salt in which the ratio of paroxetine to acid (by mole) is
15 1:1.

In respect of the multifunctional acids in the Group of Acids, a further aspect of the present invention provides a paroxetine salt in which the ratio of paroxetine to acid (by mole) is 2:1.

- 5 In the salts with multifunctional acids, the acid anion may be associated with a proton (hydrogen atom) in addition to paroxetine or may be associated with another cation, for example an alkali metal or ammonium cation to produce a mixed salt.

When the acid in the Group of Acids exists in enantiomeric forms, this invention includes
10 salts with both D-acid and L-acid salts individually and racemic mixtures of both salts, and also diastereoisomers.

In one aspect the novel salts of this invention are provided in non-crystalline form, which may be a solid or an oil. The oil is preferably absorbed on a solid carrier, especially a carrier
15 that is usable as a component of a pharmaceutical composition.

In another aspect the novel salts of this invention are provided in crystalline form. When the crystalline form exists as more than one polymorph, each polymorph forms another aspect of this invention.

20

The paroxetine salts may be prepared by contacting stoichiometric amounts of the acid and paroxetine free base. Preferably the base is in solution, more preferably both are in solution. The acid may also be in solid form, provided that the resultant salt is not so insoluble that it forms a coating on the added solid that impedes further reaction. Mixed
25 salts may be prepared by forming the precursor 1:1 salt in situ (or 2:1 salt for trifunctional and higher acids), or using it pre-formed, and contacting it in solution with a solution containing the metal or ammonium ion.

Most commonly used solvents are suitable for mobilising paroxetine free base, for example
30 toluene, alcohols such as methanol, ethanol, propan-2-ol, esters such as ethyl acetate, ketones such as acetone and butanone, halogenated hydrocarbons such as dichloromethane.

and ethers such as tetrahydrofuran and diethyl ether. The acid from the Group of Acids is preferably added as a solution, preferably aqueous if soluble in water, optionally further diluted with a miscible organic solvent. The acid may also be added in the form of a soluble salt, for example an ammonium salt, or the salt of an amine, for example ethylamine or diethylamine.

The concentration of paroxetine base is preferably in the range 5 to 50% weight/volume, more preferably in the range 10 to 30%. The concentration of the acid is preferably in the range 0.1 to 2 molar. Elevated temperatures may be used to increase solubility.

The salts may be isolated in solid form by conventional means from a solution thereof obtained as above. For example, a non-crystalline salt may be prepared by precipitation from solution, spray drying and freeze drying of solutions, evaporating a solution to a glass, or vacuum drying of oils, or solidification of melts obtained from reaction of the free base and the acid.

A crystalline salt may be prepared by directly crystallising from a solvent in which the product has limited solubility, or by triturating or otherwise crystallising a non-crystalline salt. In general solvent systems which are suitable for preparation of the paroxetine salt can also be used for recrystallisation. An improved yield of the salt is obtained by evaporation of some or all of the solvent or by crystallisation at elevated temperature followed by controlled cooling, preferably in stages. Careful control of precipitation temperature and seeding may be used to improve the reproducibility of the production process and the particle size distribution and form of the product. Individual polymorphs are preferably crystallized directly from a solution of the salt, although recrystallizing a solution of one polymorph using seeds of another polymorph may also be carried out.

An alternative method of preparing a salt of paroxetine with an acid from the Group of Acids is to start with a salt of paroxetine with an organic acid, such as acetic acid or maleic acid. Use of another salt of paroxetine as a starting material is suitable for preparation of

the crystalline salt or, if a volatile acid such as acetic acid is used, non-crystalline salts by methods that involve evaporation (such as freeze-drying and spray-drying).

5 The salt may obtained as a solvate, when during isolation from solution it becomes associated with the solvent in which it is dissolved. Any such solvate forms a further aspect of this invention. Solvates may be returned to the unsolvated salt by heating, for example by oven-drying, or by treatment with a displacement solvent which does not form a solvate.

10 Prior to the isolation of the paroxetine salt, water may be removed from the solution containing the salt by azeotropic distillation to avoid the formation of hydrates or to obtain the product in anhydrous form. In that case, suitable solvents for the solution of the salt are those which form an azeotrope with water such as toluene and propan-2-ol. It should also be appreciated that mixtures of solvents can also be used to aid the azeotropic removal of
15 water.

Paroxetine free base may be prepared according to the procedures generally outlined in US Patent No 4,007,196 and EP-B-0 223 403. The acids in the Group of Acids are commercially available or reported in the literature.

20

The compounds of this invention may be used to treat and prevent the following disorders:

Alcoholism	Anxiety
Depression	Obsessive Compulsive Disorder
25 Panic Disorder	Chronic Pain
Obesity	Senile Dementia
Migraine	Bulimia
Anorexia	Social Phobia
Pre-Menstrual Syndrome (PMS)	Adolescent Depression
30 Trichotillomania	Dysthymia
Substance Abuse	

These disorders are herein after referred to as "the Disorders".

5 The present invention further provides a method for treating and/or preventing any one or more of the Disorders by administering an effective and/or prophylactic amount of a salt of the invention to a sufferer in need thereof.

10 The present invention further provides a pharmaceutical composition for use in the treatment and/or prevention of the Disorders which comprises an admixture of a salt of the invention with a pharmaceutically acceptable carrier.

The present invention also provides the use of a salt of the invention for treating and/or preventing the Disorders.

15 The present invention also provides the use of a salt of the invention in the manufacture of a medicament for treating and/or preventing the Disorders.

20 Most suitably the present invention is applied to the treatment of depression, OCD and panic.

The compositions of this invention are usually adapted for oral administration, but formulations for dissolution for parental administration are also within the scope of this invention.

25 The composition is usually presented as a unit dose composition containing from 1 to 200mg of active ingredient calculated on a free base basis, more usually from 5 to 100mg, for example 10 to 50mg such as 10, 12.5, 15, 20, 25, 30 or 40mg by a human patient. Most preferably unit doses contain 20mg of active ingredient calculated on a free base basis. Such a composition is normally taken from 1 to 6 times daily, for example 2, 3 or 4 times
30 daily so that the total amount of active agent administered is within the range 5 to 400mg

of active ingredient calculated on a free base basis. Most preferably the unit dose is taken once a day.

Preferred unit dosage forms include tablets or capsules.

5

The compositions of this invention may be formulated by conventional methods of admixture such as blending, filling and compressing.

Suitable carriers for use in this invention include a diluent, a binder, a disintegrant, a colouring agent, a flavouring agent and/or preservative. These agents may be utilized in conventional manner, for example in a manner similar to that already used for marketed anti-depressant agents.

Suitable pharmaceutical compositions include those described EP-B-0 223 403, and US Patent 4,007,196 in which the products of the present invention may be used as the active ingredients.

The following Examples illustrate the present invention:

20 **Example 1 : preparation of tablets**

INGREDIENTS	20 mg Tablet	30mg Tablet
Paroxetine Salt	20.00 mg (calc. as free base)	30.0 mg (calc. as free base)
Dicalcium Phosphate (DCP)	83.34 mg	125.0 mg
Microcrystalline Cellulose	50.67 mg	76.0 mg

Sodium Starch Glycollate	8.34 mg	12.5 mg
Magnesium Stearate	1.67 mg	2.5 mg

Commercial source of the ingredients

	Dicalcium Phosphate Dihydrate	-	Emcompress or Datab*
	Microcrystalline Cellulose	-	Avicel PH 102*
5	Sodium Starch Glycollate	-	Explotab.*

* Trade names

Method

- 10 1. Pass DCP through a screen and weigh it into a Planetary mixer.
2. Add 30 mesh Paroxetine Salt to the bowl.
3. Add 20 mesh Avicel and Explotab and mix all the powders for 10 minutes.
4. Add magnesium stearate and mix for 5 minutes.

15 Tablet into Pentagonal Tablets using the following punches:

30 mg Tablet	9.5 mm	Circumcircle
20 mg Tablet	8.25 mm	Circumcircle

The tablets are made satisfactorily on a single punch or a Rotary press.

20

Example 2 : preparation of tablets

INGREDIENTS	10 mg Tablet	20 mg Tablet	30mg Tablet
Paroxetine Salt	10 mg (calc.as free base)	20 mg (calc.as free base)	30 mg (calc.as free base)
Sodium Starch Glycollate	2.98 mg	5.95 mg	8.93 mg

Granular Dicalcium Phosphate (DITAB) or Dicafos	158.88 mg	317.75 mg	476.63 mg
Magnesium Stearate	1.75 mg	3.50 mg	5.25 mg

Method

1. Paroxetine Salt, Sodium Starch Glycollate and Dicalcium Phosphate Dihydrate are
5 screened and mixed together in a suitable mixer.
(Planetary, Cuble or High Energy Shear mixer.)
2. Add Magnesium Stearate and compress it into a tablet using a single punch or
Rotary Tablet machine.

CLAIMS

1. A paroxetine salt of an acid selected from the Group of Acids.
- 5 2. A salt according to claim 1 which is a salt with a D-acid
3. A salt according to claim 1 which is a salt with a L-acid
4. A salt according to claim 1, 2 or 3 in which the ratio of paroxetine free base to acid
10 (by mole) is 1:1.
5. A salt according to claim 1, 2 or 3 in which the ratio of paroxetine free base to acid
(by mole) is 2:1.
- 15 6. A compound according to claim 1, 2, 3, 4 or 5 in non-crystalline form.
7. A compound according to claim 1, 2, 3, 4 or 5 in crystalline form.
8. A process for the preparation of a compound as claimed in claim 1, 2, 3, 4, 5 or 6
20 by precipitation from a solution of the paroxetine salt, spray drying or freeze drying a
solution of the paroxetine salt, evaporating a solution of the paroxetine salt to a glass, or by
vacuum drying of oils of the paroxetine salt, or solidification of melts of the paroxetine
salt.
- 25 9. A process for the preparation of a compound as claimed in claim 1, 2, 3, 4, 5 or 7
by crystallization or re-crystallization from a solution of the paroxetine salt.
10. A process according to claim 8 or 9 in which the solution, oil or melt of the
paroxetine salt is prepared by treating paroxetine free base or an organic acid salt thereof
with an acid selected from the Group of Acids or an ammonium or amine salt thereof.

11. A method for treating and/or preventing any one or more of the Disorders by administering an effective and/or prophylactic amount of a salt of paroxetine with an acid selected from the Group of Acids to a sufferer in need thereof.

INTERNATIONAL SEARCH REPORT

I. .national application No.

PCT/EP 99/ 04543

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: 11
because they relate to subject matter not required to be searched by this Authority, namely:
Remark: Although claim 11
is directed to a method of treatment of the human/animal
body, the search has been carried out and based on the alleged
effects of the compounds.
2. ☐ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such
an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all
searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment
of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report
covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is
restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.
